

Project: Build APIs with Node.js and Express.js for Shoppyglobe E-commerce

Objective: Create the backend for the ShoppYGlobe application using Node.js, Express, and MongoDB.

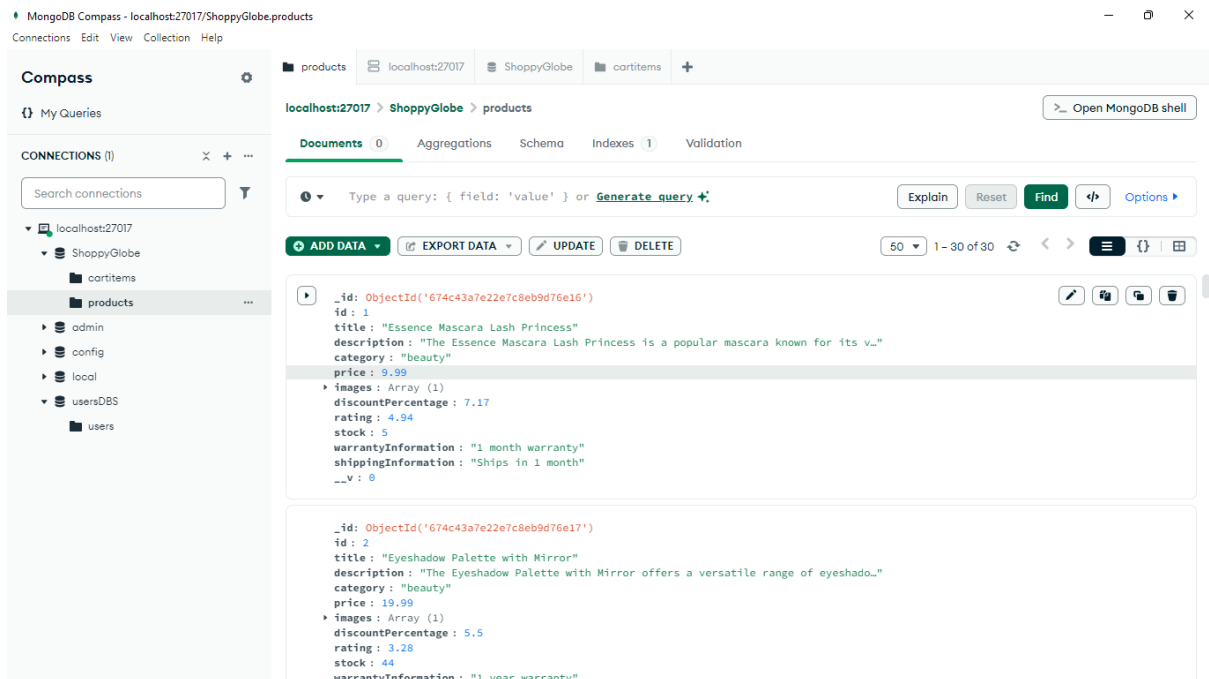

Initial data base:-

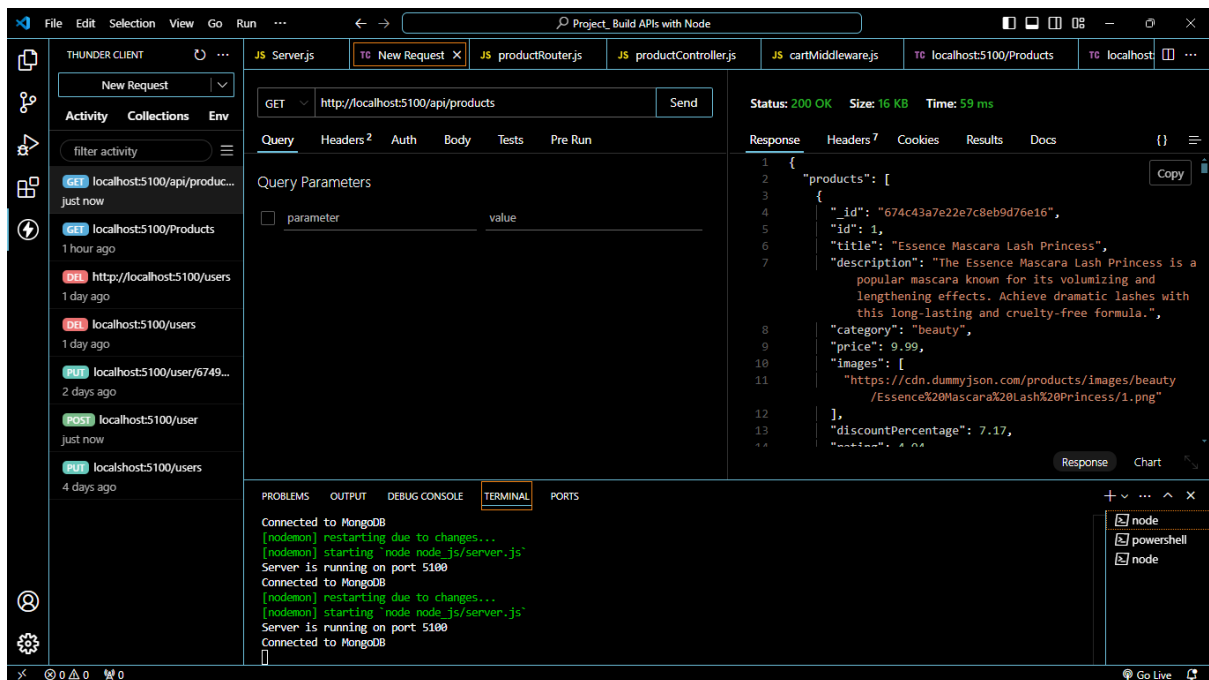

Inserted Products using api :- POST /sendData

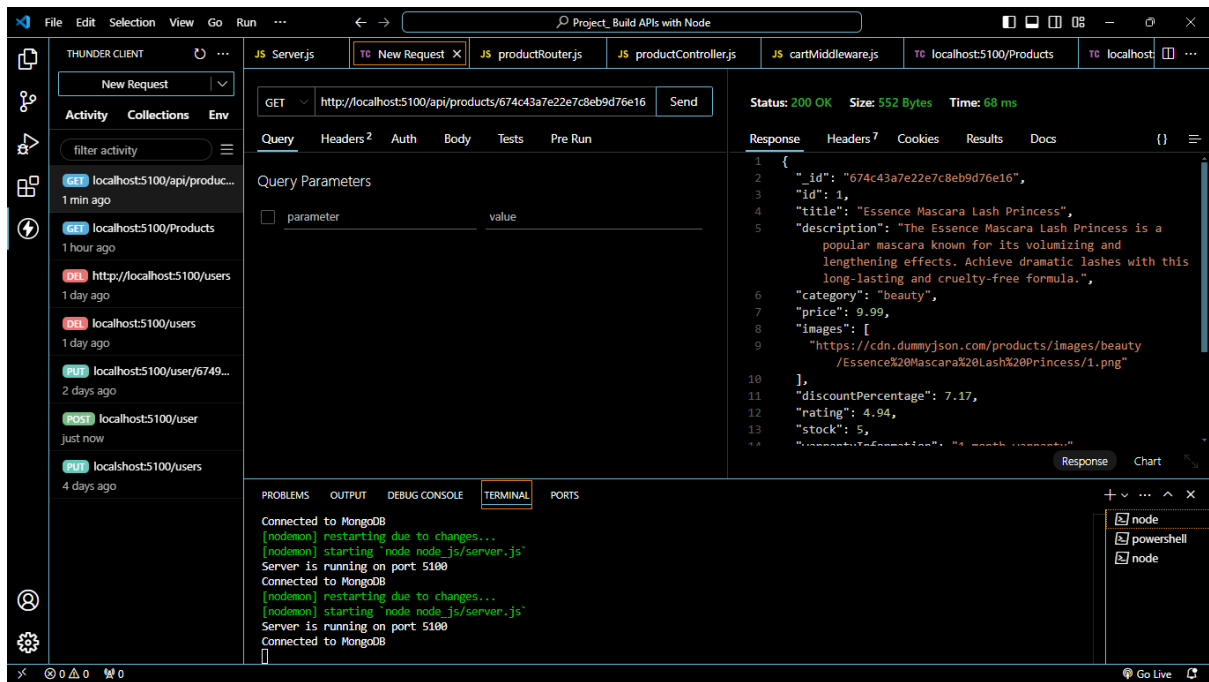

After inserting data my database :-

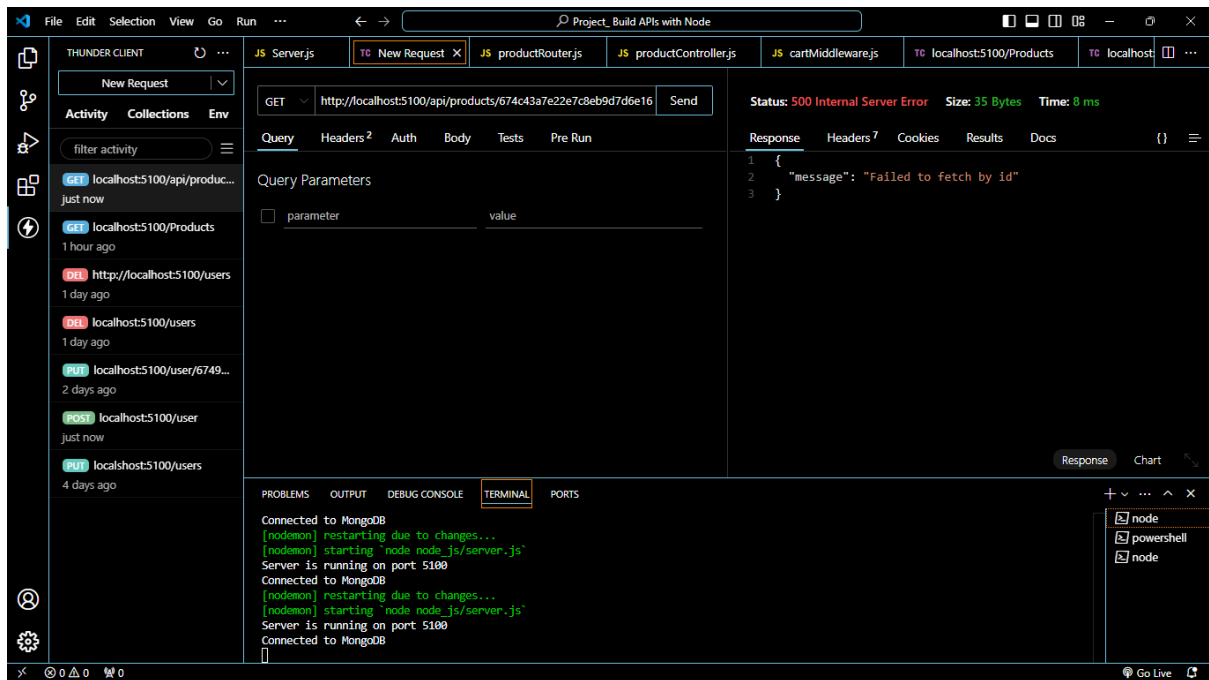

○ **GET /products:** Fetch a list of products from MongoDB.

○ **GET /products/ :** Fetch details of a single product by its ID.

if id does not exists :-

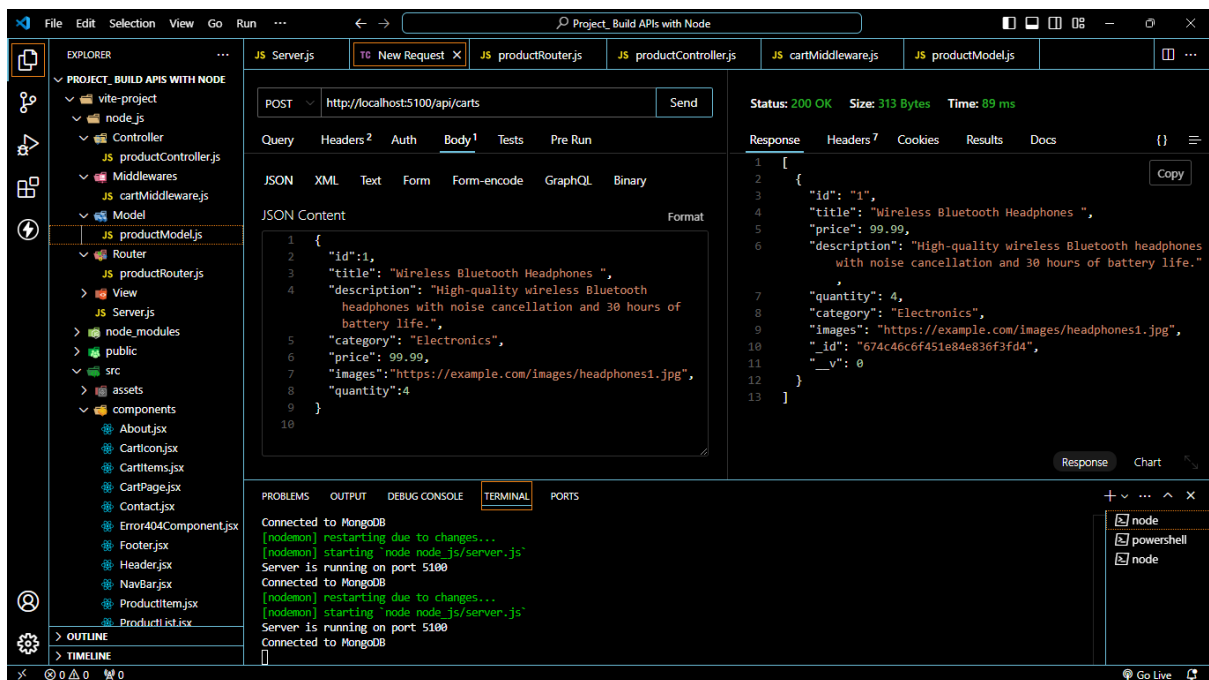

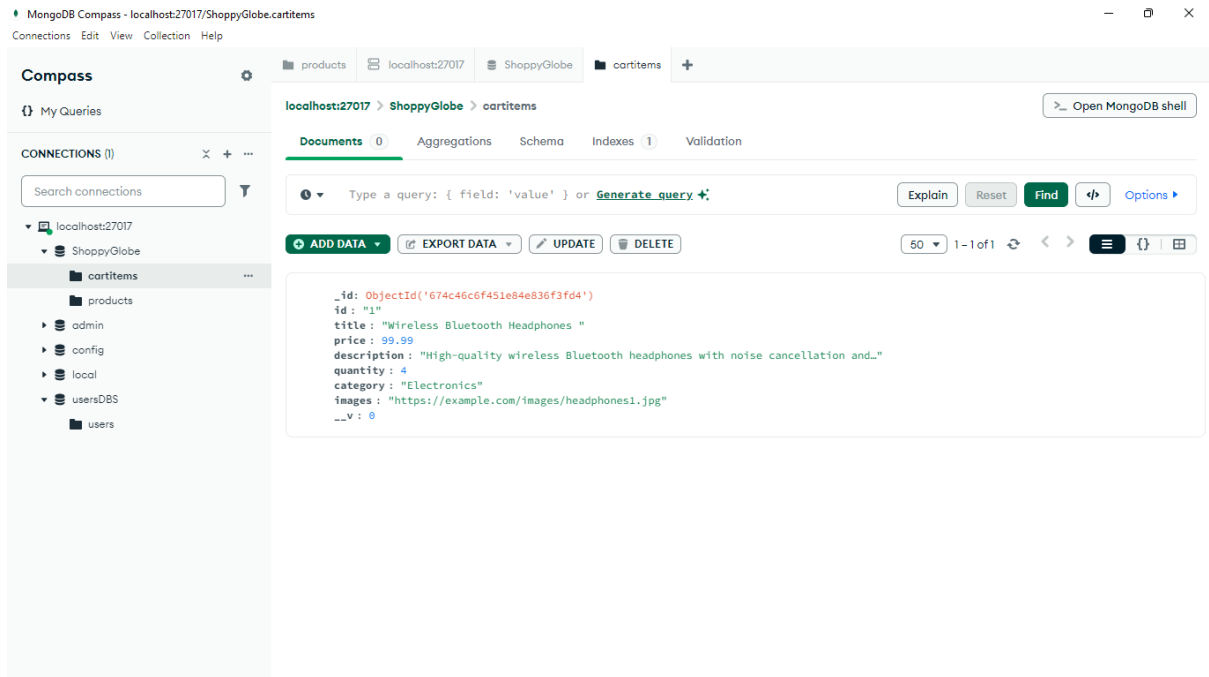

○ **POST /cart:** Add a product to the shopping cart.

Initial cart collection in database :-

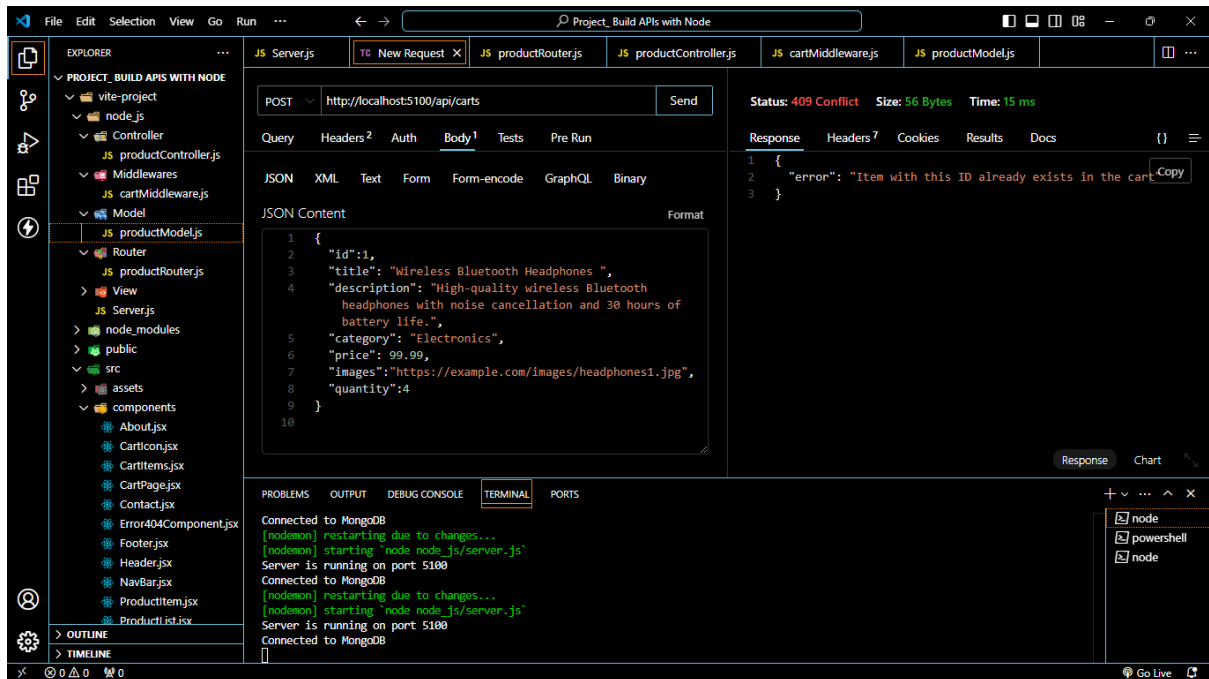

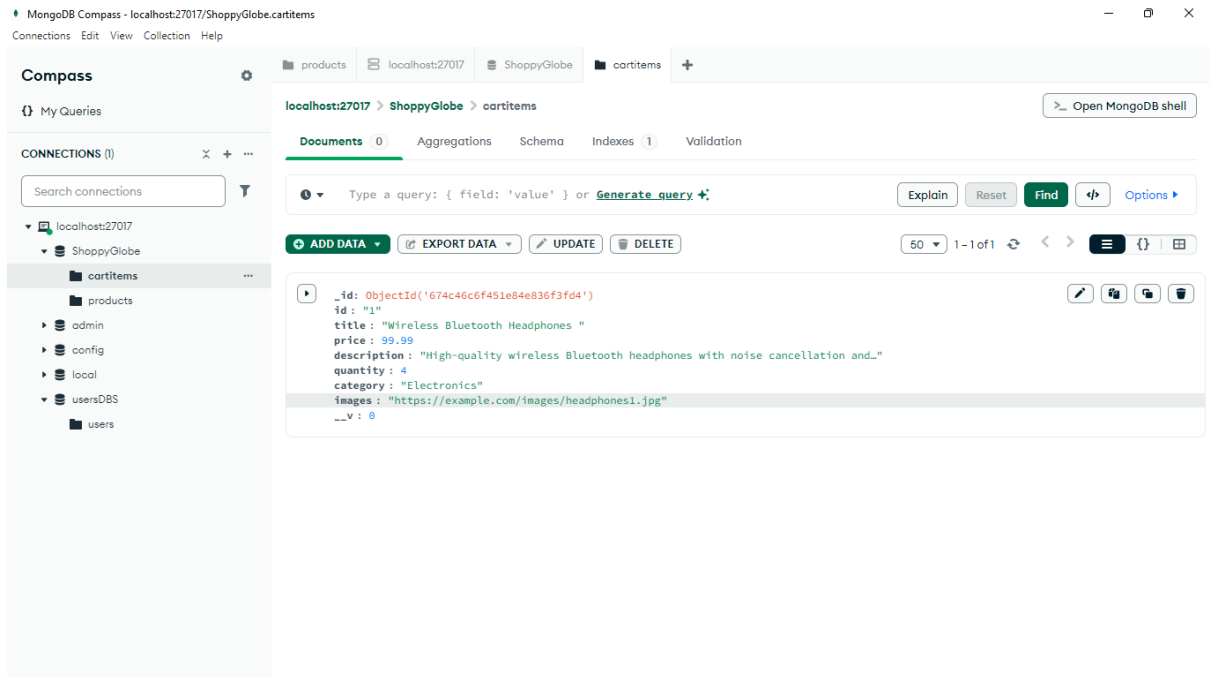

POST /cart: Add a product to the shopping cart.

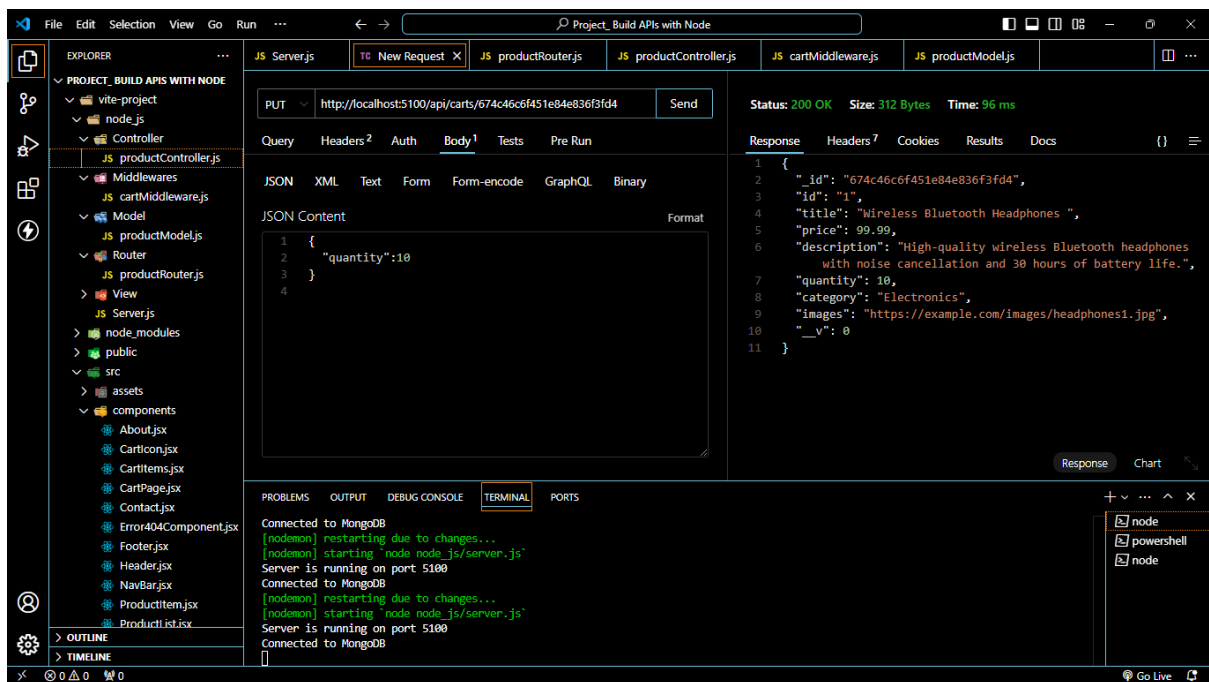

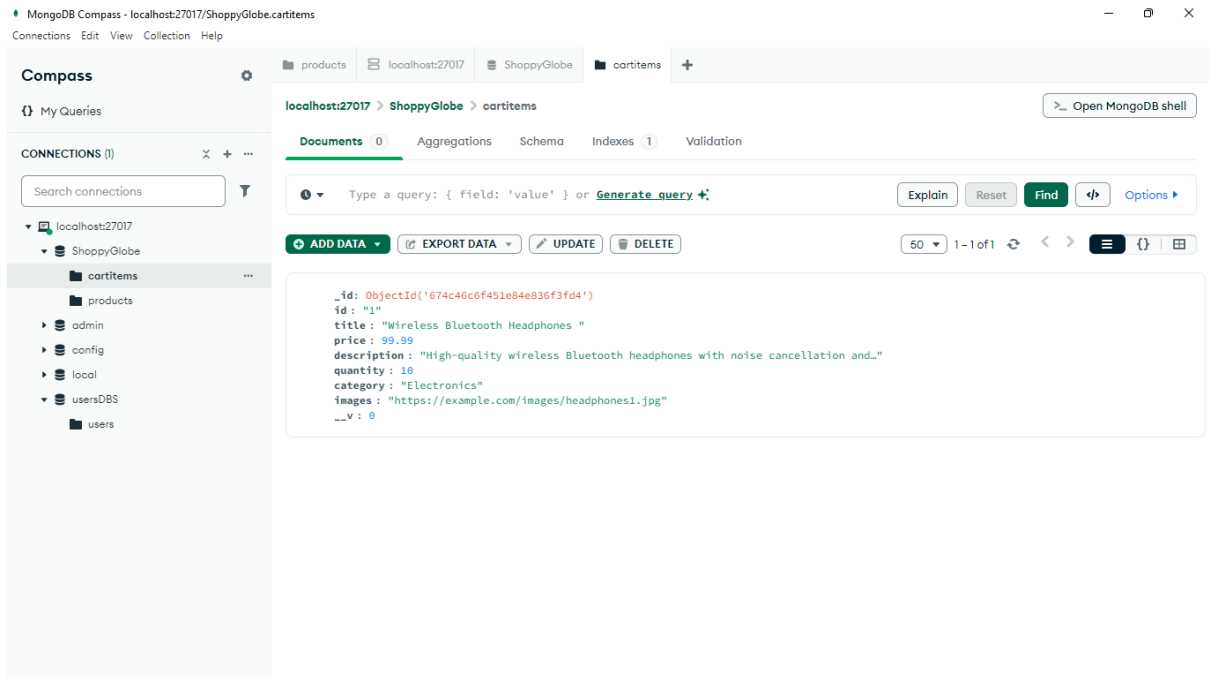

- Validate input data (e.g., check if product ID exists before adding to cart).

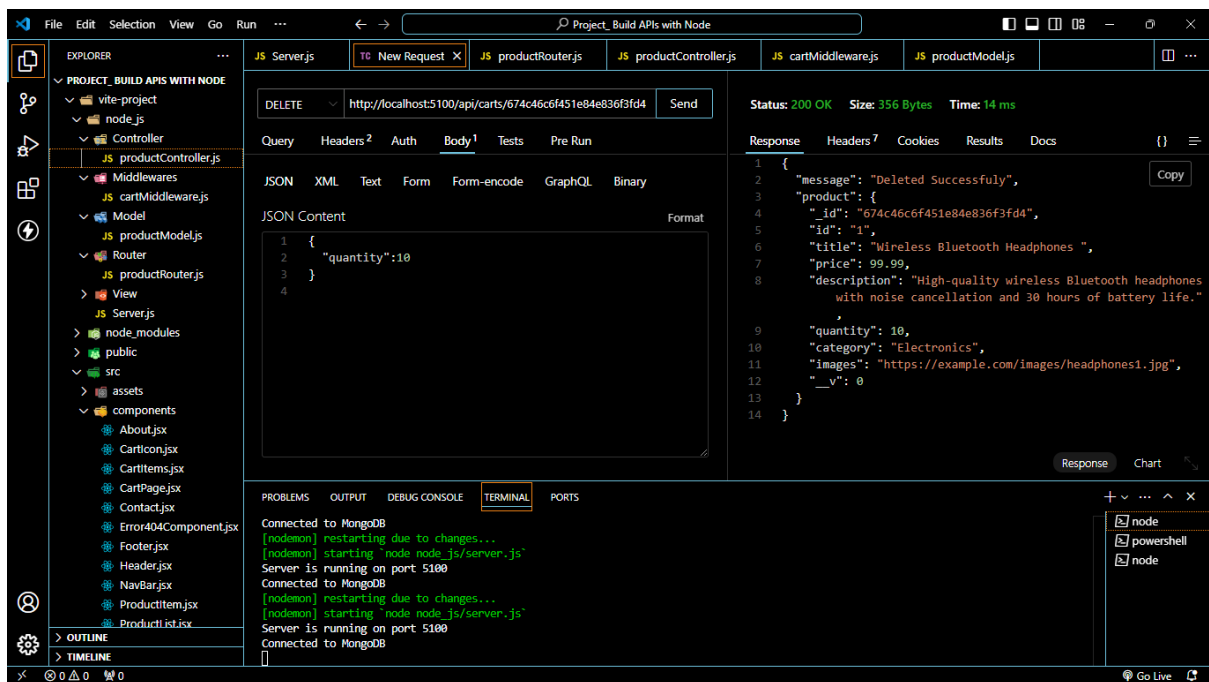

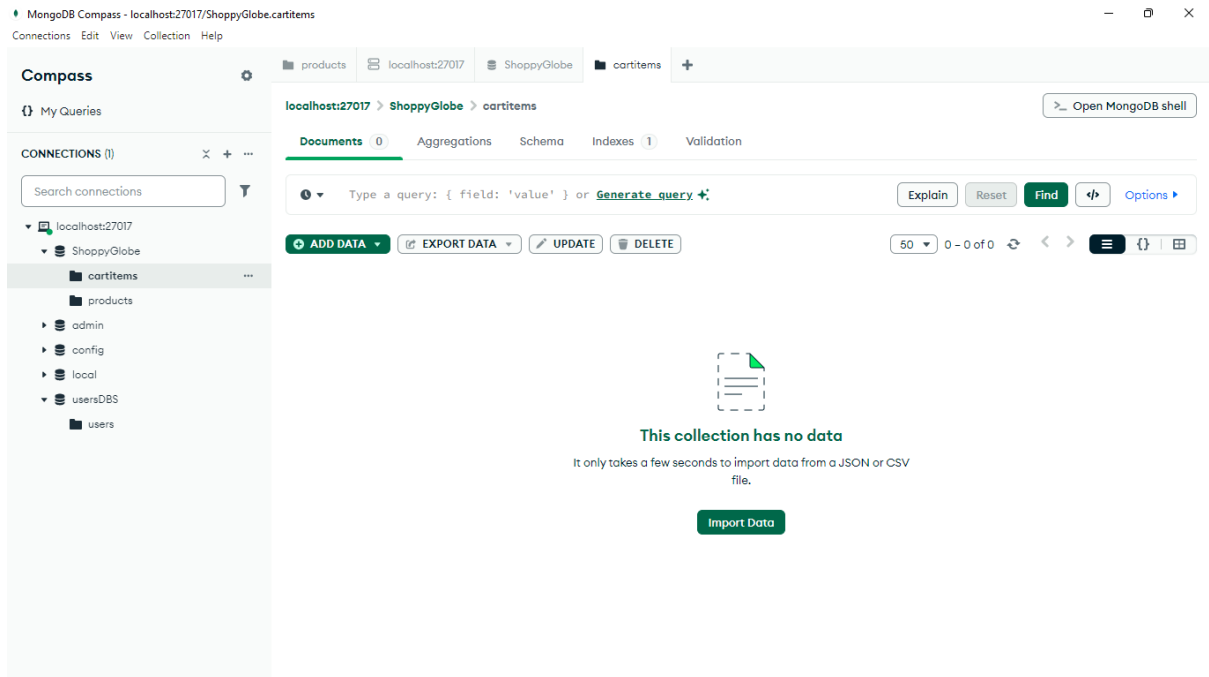

○ **PUT /cart/**: Update the quantity of a product in the cart.

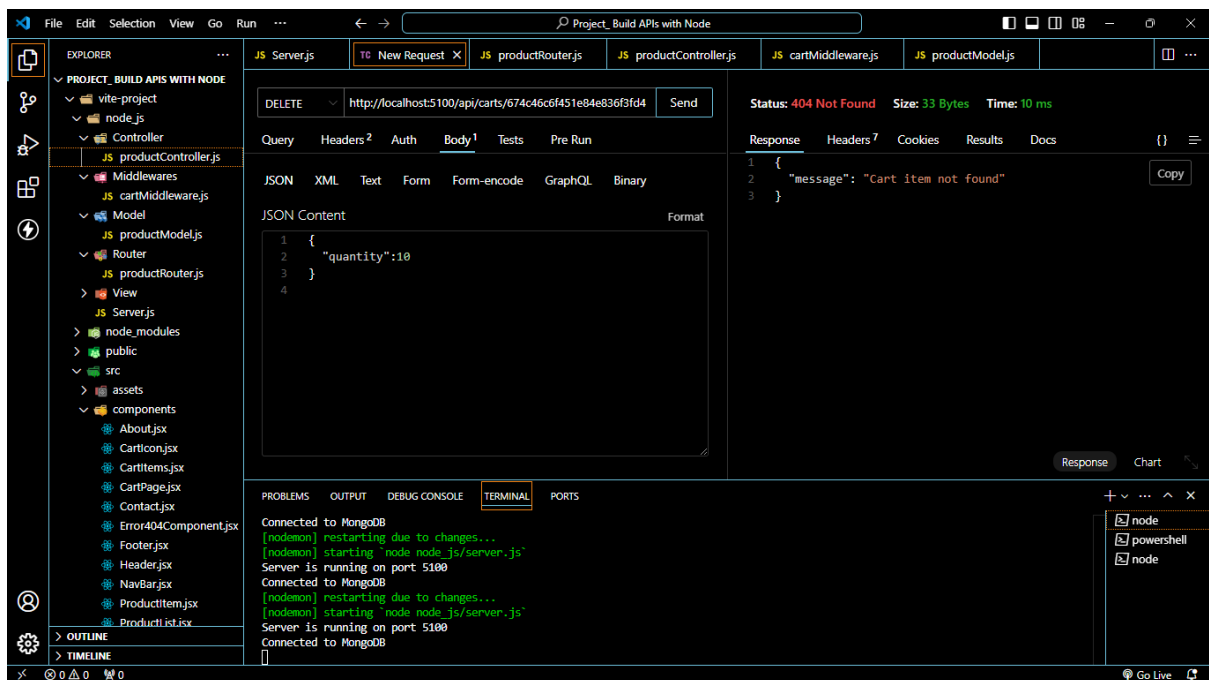

○ DELETE /cart/: Remove a product from the cart.

If item does not exists

....Added few items to cart for accessing using /Login

Authentication & Authorization

○ POST /register: Register a new user.
